What is claimed is:

1.   A detection method of omission-in-software-property-management using a network for detecting a computer omitted from a software-property management which manages, for each computer, basic information thereof and installed software, and fix-patch application status, the method comprising the steps of:

performing a first step wherein a network-connected-computer list which holds, for all computers connected to a given network, information for identifying each computer, and a software-property management list which holds, for all computers to be managed by said software-property management, information for identifying each computer, are used as a basis on which a computer is extracted that is present in said network-connected-computer list and absent in said software-property management list; and

performing a second step wherein there is created a list of computer omitted in the software-property management.

2.   The detection method according to claim 1, wherein in the first step, said network-connected-computer list and said software-property management list are used as a basis on which a computer is extracted that is present in said software-property management list and absent in said network-connected-computer list, and

in the second step, there is created a list of computer in unused state.

3.   A detection system for omission-in-software-property-management using a network for detecting a computer omitted from a software-property management

which manages, for each computer, basic information thereof and installed software, and fix-patch application status, comprising:

a network-connection management server including a network-connected-computer list which holds, for all computers

5   connected to a given network, information for identifying each computer;

a software-property management server including a software-property management list which holds, for all computers to be managed by said software-property management, information

10   for identifying each computer; and

an omission-in-software-property-management detection server which uses said network-connected-computer list and said software-property management list as a basis to extract a computer that is present in said network-connected-computer list and absent

15   in said software-property management list, and to create a list of computer omitted in the software-property management.

4.   The detection system according to claim 3, wherein said omission-in-software-property-management detection

20   server uses said network-connected-computer list and said software-property management list as a basis to extract a computer that is present in said software-property management list and absent in said network-connected-computer list, and to create a list of computer in unused state.

25

5.   The detection server for omission-in-software-property-management using a network for detecting a computer omitted from a software-property management which manages, for each computer, basic information thereof and

30   installed software, and fix-patch application status, wherein a network-connected-computer list which holds, for all computers connected to a given network, information for

identifying each computer, is received from a
network-connection-management server including said
network-connected-computer list,

5   a software-property management list which holds, for all
computers to be managed by said software-property management,
information for identifying each computer, is received from a
software-property management server including said
software-property management list, and

10   said network-connected-computer list and said
software-property management list are used as a basis on which
a computer is extracted that is present in said
network-connected-computer list and absent in said
software-property management list, and there is created a list
of computer omitted in the software-property management.

15

        6.   The detection server for
omission-in-software-property-management using a network for
detecting a computer omitted from a software-property management
which manages, for each computer, basic information thereof and
20   installed software, and fix-patch application status, comprising:

        a network-connection management section for creating a
network-connected-computer list which holds, for all computers
connected to a given network, information for identifying each
computer;

25   a software-property management section for creating a
software-property management list which holds, for all computers
to be managed by said software-property management, information
for identifying each computer; and

        an omission-in-software-property-management detection
30   section which uses said network-connected-computer list input
from said network-connection management section and said
software-property management list input from said

software-property management section as a basis to extract a computer that is present in said network-connected-computer list and absent in said software-property management list, and to create a list of computer omitted in software-property management.

5

7.   The detection server according to claim 5, wherein said server uses said network-connected-computer list and said software-property management list as a basis to extract a computer that is present in said software-property management list

10   and absent in said network-connected-computer list, and to create a list of computer in unused state.

8.   The detection server according to claim 6, wherein said omission-in-software-property-management detection

15   section uses said network-connected-computer list and said software-property management list as a basis to extract a computer that is present in said software-property management list and absent in said network-connected-computer list, and to create a list of computer in unused state.

20

9.   The detection server according to any of claims 5 to 8, wherein said server sorts said network-connected-computer list and said software-property management list, and uses these sorted

25   network-connected-computer list and software-property management list as a basis to create said list of a computer omitted in software-property management or said list of computer in unused state.

30   10.   A detection program for omission-in-software-property-management using a network for detecting a computer omitted from a software-property management

which manages, for each computer, basic information thereof and installed software, and fix-patch application status, wherein

an omission-in-software-property-management detection server is allowed to

receive a network-connected-computer list which holds, for all computers connected to a given network, information for identifying each computer, from a network-connection-management server including said network-connected-computer list,

receive a software-property management list which holds, for all computers to be managed by said software-property management, information for identifying each computer, from a software-property management server including said software-property management list, and

use said network-connected-computer list and said software-property management list as a basis to extract a computer that is present in said network-connected-computer list and absent in said software-property management list, and to create a list of computer omitted in the software-property management.

11. A detection program for omission-in-software-property-management using a network for detecting a computer omitted from software-property management which manages, for each computer, basic information thereof and installed software, and fix-patch application status, wherein

an omission-in-software-property-management detection server is allowed to

create a network-connected-computer list which holds, for all computers connected to a given network, information for identifying each computer,

create a software-property management list which holds, for all computers to be managed by said software-property management, information for identifying each computer, and

·use said network-connected-computer list and said software-property management list as a basis to extract a computer that is present in said network-connected-computer list and absent in said software-property management list, and to create a list

5 of computer omitted in the software-property management.

12. The detection program according to claim 10 or 11, wherein

an omission-in-software-property-management detection

10 server is allowed to use said network-connected-computer list and said software-property management list as a basis to extract a computer that is present in said software-property management list and absent in said network-connected-computer list, and to create a list of computer in unused state.

15

13. The detection program according to claim 10 or 11, wherein

an omission-in-software-property-management detection server is allowed to sort said network-connected-computer list

20 and said software-property management list, and to use these sorted network-connected-computer list and software-property management list as a basis to create said list of a computer omitted in software-property management or said list of computer in unused state.

25
